

**Dr. Frederico Faria** has investigated the association between neurodegenerative and cognitive disorders on gait performance and falls. He is currently investigating the link between gait performance during complex tasks and morphological brain alterations.

**Joel Mahon**, is a MSc candidate in the Department of Kinesiology at Western University and is supervised by Dr. Manuel Montero-Odasso. Joel completed his BHSc at Western University in 2018. His research interests include exercise, cognition, and depression.

**Abdelhady Osman**

Abdelhady Osman is a MSc candidate in the Department of Epidemiology and Biostatistics at Western University and is co-supervised by Dr. Manuel Montero-Odasso and Dr. Mark Speechley. Abdelhady completed his BMSc at Western University in Physiology and Pharmacology in 2018. He is investigating the impact of fall risk-increasing drugs on gait performance in older adults.

**Anaïs Payen:** I am a pharmacist and PhD student. I am working on potentially inappropriate medications in people aged 75 and over.

**Dr. Samuel Searle** completed his geriatric medicine subspecialty training in 2017. For the last three years he has been working on his PhD at the MRC Unit for Lifelong Health and Ageing at University College London under Dr. Daniel Davis. **Munira Sultana** is a Postdoctoral Fellow at Gait and Brain Lab supervised by Dr. Manuel Montero-Odasso. She obtained her PhD in Health Science from Western University. She also is an internationally trained physician with Masters in Public Health.
